Description of Duties
-provide adequate network services to the mission and Network standardization and virtualization team member.-Manage Data/Voice/Wireless/VPN Networks including L1,L2,L3,L4 Network Devices, EIGRP, VoIP, VoFR, QoS, HSRP, STP, VTP, Trunking, VLAN, PPP, Clustering, SNMP, FTP.-Manage Software/System Services i.e. ADS, DNS, WINS, DHCP, FTP, IIS, MRTG, NTOP, Vmware(Team Member), Surf Control, Websense, Nagios, Symantec Antivirus Corporate Edition, HP Openview, Lotus Notes.-Manange, plan, design and implement Network projects in the Mission.-Manage the work of personnel and/or contractors assigned to the Unit.-Plan and impleme Disaster Recovery and Business Continuity servers. -Impleme HP Storage Works.-Coordinate with UNLB and External ISP to ensure proper connectivity of the Mission network to the internet and other external sources. -Manage servers, WAN links, and configuration of Cisco routers and switches. -Provide technical guidance for other members of the Information Technology Unit.-Prepare backup procedure for Mission critical data and systems.-Impleme and maintain Data Security using Cisco Firewall, Antivirus and smoothwall.-Backbone, Regional Links and PPP Connectivity using Cisco 3600/2600 Series Routers, Satellite Modems and Leased Line Modems.- Configure EIGRP Routing Protocol & Cisco IOS Firewall. Configure VOIP/VOFR & E1 Lines. Configure WAN Links using Multilink and configure QOS to prioritize Voice and mission critical application over other traffic.-Configure DMZ for Lotus Notes Webmail and Web Servers.-Design and impleme PPP between HQ and 3 Regional Offices.-Design and Impleme of Fiber/ Fast Ethernet Switch Core using Cisco 4510/3550/3524 Switches. Configure EIGRP, HSRP, QOS, SNMP, Stacking, STP, VTP.

Summarize any of Your Achievements

-Managed to solve a long outstanding call drop problem between Makamba Region and the Mission HQ.With the call drop problem, all Makamba users were not able to make calls using their Pin Codes.All the local and inter-mission calls were dropped after 3 minutes or less. After upgrading the Cisco router IOS version the problem was solved.Now users in Makamba Region are able to make continuous calls using their Pin Code and/or for internal&inter-mission calls.-Managed to increase the Links speed and the availability of IT services for 3 Regions(Gitega, Ngozi and Makamaba) and up to 0.95 by enabling the OSPF between Regions and Mission HQ and by conducting a planned preventive maintenance.-Managed Mission Link congestion avoidance between Regions and Mission HQ by conducting a Mission traffic identification,Re-classification and implementing appropriate QoS in all Cisco routers.Following the Cisco QoS best pratices, the 3 regions have now a high speed links and high network connectivity to the internet and other Enterprise Resources. -Implemented a backup link for Burundi UNDP Agency. Now if the UNDP ISP is down, users are automatically connected to the backup link without interruption of services.-Implemented a Websense server,BINUB-PIX, Binub-proxy(Smoothwall)according to the Mission standards.-Solved a routing problem for Burundi WHO and setup of their firewall to meet the Mission standards. As result the WHO network is more secure and stable from attacks than before after reinforcing that policy in the firewall.Moved from old ISP-HK to Germany CETEL ISP in less than 10 Hours. By configuring in parallel another Router and Smoothwall firewall, have been able to move ISP to ISP without a significant interruption. The planning to do some task during no working hours and some others during working hours has made this exercise successful and 0.98 of the BINUB staff did not realize this operation as they did not loose Internet connectivity.-Recently implemented new Mission Border routers facing UNLB and corrected the call drop problem between the BINUB and UNLB. After changing the Voice priority the problem was solved. -Working on the Mission Virtualization project and I have been trained by the Copy Cat kenya Company here in Bujumbura.

Description of Duties
-Offered high quality standard technical support services to mission staff.-Ensured high percentage network availability and efficiency.-Kept abreast with the technology development by capacity building.-Solved problems concerning hardware and software for workstations.-Managed network Security including Cisco PIX/Smoothwall/Cisco IOS IDS Firewalls.-Planned and implemented Disaster Recovery and Business Continuity plans. -Implemented HP Storage Works.-Managed Software/System Services i.e. ADS, DNS, WINS, DHCP, FTP, IIS, MRTG, NTOP, Vmware, Surf Control, Websense, Nagios, Symantec Antivirus Corporate Edition, HP Openview, Lotus Notes.-Organised network Assessment, documentation (technical, operational & Economic assessment) and Change Management.-Provided Support and Training to Help Desk/Customer Support Staff for Network and System Administration on Cisco, Windows 2000/2003.-Provided customer support to the Mission.-Conducted UTP/fiber cabling during mission transition plan to BINUB, and liquidation of ONUB.-Provided data connections in line with the changes arising from ONUB/BINUB network redesign.-Carried out tests to ascertain that the cabling is up to required standards.-Updated the database to reflect all the cabling, routing and switching changes in both UTP and Fiber links and Chalet points, after thorough testing.

Summarize any of Your Achievements
-Implemented fiber connections between ONUB server room and 13 chalets(Distribution points) to connect 85 containers by using only 2 fiber cables with 6 pairs each. By breaking out a fiber cable pairs and terminate the necessary pairs while others were terminated at the next distribution point it was possible for only one pair to be used clockwise and anti-clockwise as main link and backup link for each chalet.Using SC fiber connectors 3km of fiber cable were run in less than 1 month.In parallel 300km of UTP cable were run to connect more than 2000 users in the onub mission including regions.This fiber connectivity has improved the LAN speed up to 1Gb between the distribution and access switches.the financial resources which was to pay an external contractor was allocated to other projects of the Mission. -Configured and setup wireless links using Cisco Aironet 1310, 3550 and 340 as bridge and/or Access point for PPP and Point to multiple links.This to avoid losses in UTP cables for more than 65m and/or digging.-Received an ONUB Network UTP/FIBER cabling expert Certificate in a ceremonie held in Bujumbura CITS Logbase in Burundi.This was in recognition of a quick and well done job while starting up the ONUB Mission.

Reasons for Leaving
After its successful implementation of its mandate, the onub mission was liquidated and a new mission was setup. Recruited in the new BINUB Mission after a competitive recruitment process.

Description of Duties
Installation, configuration, monitoring and maintenance of multi-layer LAN/WAN CISCO equipments (Routers, Switches) for the proper running of the UNMIL's communications systems including voice and data (VoIP and VoFR). Administration of LAN, WAN and Wi fi networks. Oversees the more complex interfacing of LAN equipment with the satellite and microwave modems. Overall maintenance of Data security projects with emphasis in Cisco firewalls. Implementation of 802.1x authentication and port security. Configuration and maintenance of Scrutinizer, HP Open view, Cisco Works and MRTG. Installation and configuration of Ethernet and IP protocols. Development and implementation of voice over frame relay,voice/video over IP and other data integrated technologies. Manages the IP addressing scheme, plus sub-netting and route summarization to optimise the system. Create/ update technical documentation and procedures. Provide customer support to the mission's local and wide area network using mostly CISCO routing, switching and multi service platforms. Coordinates with UNLB to ensure proper connectivity of the Mission network to the internet and other external sources. Participate in researching, evaluation, assessments and testing of new technologies. Assigning Network assistants to various operations and directs their activities, review and evaluate their work to ensure that customer requests are satisfied. Perform hardware and software upgrades as necessary. Assist in the installation, operation, maintenance, troubleshooting, and upgrade of overall network infrastructure and cabling. Ensuring antivirus software's are properly updated and network is monitored for security breaches. Participate in the actual physical installation of the networks from planning to final customer connections. Demonstrate organizational skills and ability to establish priorities to plan, coordinate and monitor own work plan with minimal supervision under tight deadlines and demanding conditions.

Summarize any of Your Achievements
One of my major achievements involves installation of networks in Pan Africa Plaza – UN Head Quarter of UNMIL in Monrovia Liberia. Designing, Configuring and Implementation of the network e.g. point to point connections, inter VLAN routing, summarization of routes was done by me. So the designing of the UNMIL HQ was one of my best achievements while working in UNMIL.

Description of Duties
Plans, designs, and maintains the Lotus Notes/Email/Internet/Intranet system within the mission. Supervises installation and maintenance of advanced Virus Protection software for network servers. Worked as a Team member for disaster recovery plans. Initiates performance standards and corrective measures to improve service quality and performance. Manages the user access control for network resources; data security back up; LAN security systems. Providing customer support services (hardware, office software, web-mail printing etc) includes Ms-Office, MS-Project, Reality ,Mercury, Galileo, web browsers and Printers. Installation of windows 2000 Servers, Proffesional and 98 desktops . Configuring and Installation of Norton Ghost Server and Clients . Taking care of the network design within UNLB using (Fibre Optics, Cat 5 and Cat 5E cabling, Coaxial and Thick Ethernet, Patch Panel Switches, Hubs and Cisco Wireless Adapters and Routers). Implementing of fibre optics network to setup UNLB on giganet backbone by laying, terminating & testing most of the fibre installed in UNLB.

Summarize any of Your Achievements

The Main achievement in UNLB was setting the Mobile Deployable Telecommunications System (MDTS) Van for the mission including the establishment of Active Directory Service, Proxy Servers, Norton Antivirus,Lotus Notes and wifi LAN. These use to be time bound projects which should accomplish within stipulated timeframe. Besides this Fiber Optics was my key speciality in Brindisi.

Description of Duties

Administration of Windows ADS domain architecture .Responsibilities include planning, designing and implementation of ADS topology, Domain and DC placement, Domain consolidation and Migration. Performs fine tuning, configure and monitor replication; Design, test, roll out group policy and manage. Configure and maintain Active Directory, WINS, DNS, DHCP, file replications, write logon scripts.Responsible for the operation and management of UNMOGIOP'S LAN and WAN network infrastructure. includes planning, designing and implementation of Core routing and switching infrastructure, configuring and administering of Cisco routers and switches, Setting up redundancy, perform performance tuning, set priority and provide QoS for delay sensitive applications. Lotus Notes Domino adminstration,Conducting extensive research, evaluate new technologies and recommend the installation of new software of equipment for the enhancement of UNMOGIP's existing services. Set up pilot projects for the introduction of the new services, perform appropriate tests and pre implementation activities, prepare detailed documentation and operational procedures, assist operational groups in the implementation of the new services. Responsible for the implementation of network security solutions. Tasks include configuring Cisco Pix firewall, Netscreen, configuring site to site and clients to site VPN tunnels.Manage the log of all incoming network faults; coordinate the repair, with the relevant technical staff. Troubleshoot for any network fault on UNMOGIP's Email and data and voice over satellite network in HQ and the Field Stations. Coordinate the scheduling of site survey, reference to upgrade and installation of all networking software and hardware equipment throughout the mission area. Determine the schedule for system maintenance. Assist the CITU/CCITS in the formulation of the budget, Provide high level technical support for UNMOGIP in IT related issues.

Summarize any of Your Achievements

I am currently responsible for the IT and communications network of UNMOGIP within the communications and Informant technology section. I Also act as officer in charge of Information Technology unit During my stay with the unit I have written a comprehensive report on how to Restructure the operation of data and voice infrastructure of UNMOGIP network infrastructure, also implemented Network wide security policy and Disaster Recovery strategy. Auditing of ICT Systems (Networks, Support Structures) in line with United Nations Department of Peace Keeping Operations (DPKO) Data Security and Business continuity. My achievement include the development standard Policies and Procedures and DRBC plans, planning, designing and implementation of Core routing and switching infrastructure, IP subnet allocation, configuring multiple Cisco routers and switches, Responsible for the implementation of network security solutions for the entire UNMOGIP Voice and Data Network. Tasks includes configuring Cisco Pix firewall, Netscreen, checkpoint, configuring site to site and clients to site IPSEC VPN tunnels through various hardware.Draft documents, policies and standards including Technical evaluation of IT and network equipment, including Internet Service Providers. Perform the role of OIC Information Technology Unit during the absent of the Chief Information Technology Unit. Performing 24/7 duty officer tasks according to UNMOGIP'S Standard operating procedures

Description of Duties

Lead the Core routing and switching project of UNMIK. My Responsibilities include planning, designing and implementation of Core routing and switching infrastructure, IP subnet allocation, configuring multiple Cisco routers and switches, Setting up redundancy, perform performance tuning, set priority and provide QoS for delay sensitive applications.Developed a practical anti-virus management and response policy, which ensured timely emergency response and routine anti-virus control. Implement Logging and Firewall Intrusion Detection Sensors, to monitor network activities. Execute penetration audits of all hosts that are accessible through the Internet with state-of-the-art Open Source scanning and audit tools. Assess penetration testing results, validating real vulnerabilities.Provide specific advice to management both on how to remedy actual vulnerabilities on network nodes including servers, clients, routers, switches and firewalls and how to harden them. Provide recommendations on corporate security policies.I was directly responsible to manage a project for setting up separate network for Kosovo Provisional govt and Kosovo police nation wide by partitioning UNMIK backbone with the help of IPSEC tunnels and physical separated links. Responsible for the implementation of network security solutions for this dynamic and complex environment. Tasks includes configuring Cisco Pix firewall, Netscreen, checkpoint, Stongate firewalls, configuring site to site and clients to site IPSEC VPN tunnels through multiple Cisco Pix firewalls, VPN concentrators .Implement Logging and Firewall Intrusion Detection Sensors, to monitor network activities. Assess penetration testing results, validating real vulnerabilities. Provide specific advice to management both on how to remedy actual vulnerabilities on network nodes including servers, clients, routers, switches and firewalls and how to harden them. Provide recommendations on corporate security policies.

Summarize any of Your Achievements

I spent most of the past four years of my stay in the mission in a continuous learning environment at UNMIK, where I gained added knowledge and experience on how to effectively design an efficient and secure enterprise scale network and measure its performance. I design and maintain enterprise networks with the following parameters in mind: security, performance, reliability and QoS. I have a Strong knowledge of various routing protocols including RIP, IGRP, EIGRP, OSPF, & BGP4. I have also worked on a wide range of Hardware and software during my stay in the mission. Currently I hold a CCNA and also Have completed Written Cisco CCIE certification on Routing and Switching . I am at ease in a firewall-protected, proxy and reverse proxy server controlled, load balanced, routed, switched (as in VLAN-partitioned and QoS-optimized), subnetted and NATed TCP/IP environment. I have also worked on windows ADS migration and structure design and have gained a good working knowledge.

Reasons for Leaving
Reappoited to UNMOGIP , to work as Supervisor Network Adminstration Unit.

Job Title	Type of Business	From - To
IT Assistant	**Peace Keeping Operations**	**01/11/2000 - 01/11/2003**

Description of Duties

I started working for UNMIK as a Network Administrator looking after over 50 Windows NT , Novell servers, and over 140 Cisco routers and Switches. Related tasks include Routing; providing router configuration and installation. Configuring IP RIP, EIGRP, OSPF. HSRP, Policy Routing, Route Redistribution, custom and priority queuing for frame relay. Troubleshoot E1 lines, TCP/IP problems, connectivity issues in a multi protocol environment. Design and implement Frame-relay, ISDN, E1, Microwave, Ethernet and Gigabit Ethernet, wireless 802.11b and various WAN links. Switching related tasks included implementing VLANS, VTP domain, configuring trucking on Fast-Ethernet channel between switches, Spanning tree, and port security. Configuring static and dynamic NAT, inside Global Address Overloading, TCP over load distribution, PAT. Implemented traffic filters on Cisco routes using Standard, Extended, Dynamic, reflexive and Context based Access lists. I was Part of Active Directory Implementation team; duties include Domain and DC placement, Domain consolidation and Migration. Perform fine tuning, replication configurations, Group policy management and roll out. Servers related services such as server room improvement, Proxy Servers (ISA, CE), File Servers. user access and rights management, Enterprise Backup Solution (SAN, NAS, Veritas), Disaster Recovery ,Enterprise Anti Virus Servers, OS Platform Installation(NT4, Advanced W2k, AD migration, Novell,Linux), Windows Networking Components(WINS, DNS, DHCP), network management and monitoring(MOM, CIM7, MRTG Smonitor, Cisco Works)and software and patch deployment.Responsibility includes regular maintenance, security patch update and troubleshooting and logical disks. Conducted scheduled backups. Network Monitoring; Cisco Works 200, MRTG, HP Open view, Implemented SNMP on Cisco routes to allow for network management. Install Packet Shaper as QOS system to monitor and manage network traffic.

Summarize any of Your Achievements

During my stay in UNMIK mission, I was responsible for the planning, design, implementation, and maintenance of the UNMIK's LAN\WAN and related network services (Internet, E-mail, etc.). Throughout my stay, I have gained experience in providing a high level technical support, including identifying and resolving problems on Cisco supported products, Windows NT/2000 ADS infrastructure. I have gained Strong experience with a wide range of hardware and software including Cisco 800,3810, 3600, 2600, 3745 series routers 1900, 2900, 3500 ,CAT6500 series switches, Pix 520,525,Stongate, netscreen, checkpoint Firewalls, VPN 3000 Concentrators, Cisco Content Engines ,Packet shapers. In-depth knowledge of LAN/WAN design and implementation, TCP/IP, VPN and Network Security .I was Also responsible for establishment & enforcement of guidelines/principles for the operation of the UNMIK Network Security and Disaster recovery procedures. Through years I have achieved tremendous experience in intranetworking and securing enterprise network.

Reasons for Leaving
I was assigned to be a memeber of Network Development team

Description of Duties

Responsible for providing adequate network services to the Mission. Analyzes, plans, designs and implements network projects in accordance with Mission requirements; Reviews network configuration ensuring maximum efficiency; Implements, under the overall Chief ITU supervision, network backup and security policies; Assist on the preparation of specifications for the request of equipment and services related to networking; Directs and supervises, when requested by the Supervisor, the work of personnel and/or contractors assigned to the Unit, in terms of network equipment installation, support and maintenance and organizes prompt network support by assigning the available technical resources while exercising quality assurance functions; Coordinates with other specialists and collaborates with external partners to ensure proper connectivity of the Mission network to the internet and other external sources; Uses network management and monitoring tools to prepare problem-analysis reports and resources utilization data; Works on the development and implementation of Voice over Frame Relay, Voice/video over IP and other voice, video and data integration technologies; Provides customer support to the Mission's Local and Wide Area Network using mostly CISCO routing, switching and multi-services platforms; Supports the design, implementation and maintenance of Data Security projects with emphasis in CISCO and StoneGate firewalls; Participates in the actual physical installation of networks from the planning to final customer connections. Perform other duties as required.

Summarize any of Your Achievements

Initiated Mission Network Standardization on LAN/WAN devices in aligns with DFS MNS guidelines. Standardized QoS Templates for routers, Security Templates for ISP routers, Secure Access Layer Switch Templates with IEEE 802.1x, Port-Security, and STP Toolkit, and drafted SOPs for Teamsites Network design and Firewall Cluster implementations. Design and Implementation of Secondary Data Center and distribution with Catalyst 6500 series, secured DMZ setup for Lotus Webmail services on StoneGate Firewall Clusters, network administration and support for 25 WAN sites and HQ CAN/LAN with 2 Data Centers, 22 StoneGate Firewall clusters for the ISP links, campus area networks with Catalyst 4500, Catalyst 3750 and Catalyst 3560 series switches, Metropolitan private leased line circuit between HQ and Logistics Base with secure IPSec encryption, 50+ Cisco Routers for region borders and ISP links, over 300+ Access Layer Switches, over 200+ Wireless Access Points and Bridges with over 7000 IP nodes. Conducted vulnerability assessments and penetration testing for the Cisco network devices and network management unit servers using open source network security tools such as Nmap, Nessus, Wireshark, Tcpdump, Tcptraceroute, Nikto, Netstumbler, Kismet, Metasploit Framework, and BackTrack. Implementation of Cisco NAM and open source tools such as Nagios, MRTG, Ntop, Syslog-NG, and custom Linux shell scripts for configuration backups, monitoring, analysis, and troubleshooting. Upgrading of Cisco 2600 series routers to Cisco 2800 Series ISR routers, and Cisco 3700 Series routers to Cisco 3800 Series ISR routers to improve performance, and packet throughput. Upgrading of Cisco IOS images to latest T1 stable releases with crypto support and enable SSH to replace unsecure telnet. Initiated centralized device inventory records, technical records, and change management records, to refer, verify, and rectify for the fault history, trends, and tracking of individual network devices. Technical evaluations, preparation and planning for the projects and requisitions for the switches, routers, firewalls, network related software, and hardware accessories for the entire mission network infrastructure. Deployment of LEAP and PEAP based 802.1x implementations over Wired and Wireless infrastructures to prevent unauthorized network access with the implementation of redundant Cisco Secure ACS Radius clusters, and Microsft Internet Authentication Radius Services. Implementation of centralized redundant Cisco Secure ACS TACACS+ clusters for the mission wide AAA implementation for Authentication, Authorization, and Accounting of Cisco network devices access for CITS IT support personnel with individual subnets and group restrictions for each regions and teamsites. Utilizing of Fluke DTX-1800 Series cable analyzers to certify Gigabit trunk links, and implementation of Fluke OptiView Series III for the campus networks analysis and Wireless Infrastructure Analysis. Leading, mentoring and coaching of network team members for the productivity and efficiency of project deployments and mission network support.
